

NRL Trophy

NRL was after a scaled up but exact replica of the NRL Trophy for the season launch, the first of its kind for such an event. Using a Faro Laser Scanner and Model maker Combo Wysiyg 3D was able to laser scan the NRL trophy without damaging the surface of the trophy.

From the raw scan data the point cloud mesh was then imported into Geomagic Studio to create a 3D surface model and exported as an IGES file ready for the multi axis robot to machine.
