

# Dental Scanning for Implant Design

Modern dentistry is adopting to CAD/CAM manufacturing techniques for Implants, crowns and caps at a rapid rate. There are a number of labs that manufacture from digital data. At Wysiwyg 3D we can provide the highest detail, resolution and accuracy replication of your abutment, through to full jaw cast so that you can electronically send the file to any digital manufacturing lab in the world!

We output in standard industry formats so that importation into the particular labs design software is flawless.

The images show the level of detail captured during our scanning process.
