

Visual Effects - Halloween Mask

Paul Braddock, came to Wysiwyg 3D to make a mask for a Halloween Party. This was not any ordinary mask - Paul a Visual Effects Artist, Sculptor, and Illustrator by profession knew all the tricks of the trade. Having worked on numerous movies including Legends of the Guardian, Paul knew the first step was to get an accurate laser scan of his face.

“The all important base for this, was a very accurate facial scan provided by the guys at WYSIWYG this ensured a perfect fit “

Laser scanning using our handheld scanner was fast and without the need for silicone and plaster is far more comfortable. Files can then be exported into a range of file types to suit any application.

“This was just a fun exercise for Halloween, and a chance to try some rapid prototyping.”

The prototyping was done at Moddler.

Visit <http://www.moddler.com/> for more information.
